Bridging the Gap Engineering

May 3rd, 2019

Dr. Greg Michaelson
Principal Engineer
WV Division of Highways

Dr. Michaelson,

You will find attached the *Final Report* prepared by Bridging the Gap Engineering for the Begley Road bridge located in Cabell County, West Virginia.

This report details the results of an examination of the three alternatives available for a 125 foot, single-span bridge. The report compares the alternatives in terms of cost, shipping restrictions, and capacity requirements. Then discusses a selected alternative that will be refined in the final project design. The report concludes with the final alternative design, which details refinements that have been made since the alternatives phase and final design calculations.

Sincerely,

Natasha Napier
